RECAP

Frontend vs Backend in a web app

Frontend

Runs in user's browser

HTML (structure)
CSS (appearance)
Javascript (interactivity)

Backend

Runs on the server

Business logic, database
access, LLM calling, other
APIs, secrets

Frontend+Backend

API contract over HTTP

The backend exposes HTTP
endpoints, called by the frontend;
the backend can also serve the
frontend code to browser

We built NextJS / React frontend, FastAPI backend,
using Pages Router, Tailwind CSS, and deployed to Vercel

Recap on the Repo

Start with the main repo: production

`git clone https://github.com/ed-donner/production.git`

This has a week1 folder with instructions for each day

We will create new repos from scratch like **saas** (today)

It has a guides folder with self-study guides

And it has community_contributions folder

In weeks 3 and 4, we will move to other course repos
