Remember this?

I AGREE

Keep an eye on the docs and Q&A
Experiment, ask LLMs but verify
Try not to get frustrated!

Embrace the rabbit holes

JWT? Stripe?
Server-side routing?

We barely scratch the surface

There's a near-infinite number
of ways to go deeper..

..and you should! Use LLMs, use
Google, explore and experiment

TO THE LAB!

Quick Recap

1. We've built a frontend using **NextJS** in **React**, with **Typescript**, with **Pages Router** (client-side), **Tailwind**
2. We've built a backend using **FastAPI**
3. We've deployed using **Vercel** to dev, preview and production, served on the internet with SSL
4. We've used **Clerk** for user authentication and for subscription plans
5. We've built a little **Healthcare App** that could easily be extended to be a powerful assistant for a medical office

oh..

..and yes it **called an LLM and streamed results...** 😂
